

Markup on Cost Menu (MU%C)

The Markup on Cost menu allows you solve the Cost-Price-Markup relation in a simple and direct way.

Button	Button Actions
	Stores or calculates the Cost of the item. $COST = PRICE \div (1 + M\%C \div 100)$
	Stores or calculates the Price of the item. $PRICE = COST \cdot (1 + M\%C \div 100)$
	Stores or calculates the Markup percent on Cost value. $M\&C = 100 \cdot (PRICE - COST) \div COST$

Example: A standard markup of a store is 60%. they received a shipment of items costing \$19.00 each. What should be the retail price?.

Solution: Follow the next sequence:

Keystrokes	Description
19 	Stores the Cost amount. $COST = 19.00$
60 	Stores the Markup over cost. $COST = 60.00$
	Calculates the retail Price amount. $PRICE = \\$30.40$
