

# Program Tracking Menu

This tool allows to follow the execution of a program in an easy way to detect “bugs” or misbehavior. To show it, press the [OPT] key in the “6) Utilities:” section, and touch the “**PRGM Tracking**” button.

When this menu is used together with the “Show Registers” options set to “ON” in the “**Settings**” ([g] [PREF] keys), you can follow step by step the program logic and calculations in an easy direct way. Also, you can “Undo” the last executed program line leaving the memory content as it was in the previous step.

The understandable instruction labels, the “Execute” or “Undo” a program step, gives you an invaluable functionality at program testing stage.
